Driving Science to 2020 Goal

As you read, I hope you will become interested in our activities. If so, let me know. I have learned that all you really need to do is raise your hand once, and you’ll be hooked.

The Council’s Leadership Committee continues to make progress with our strategic plan. We have identified the following areas of scientific interest as forming the basis for future activities: Social Determinants of Cardiovascular Health, Molecular Determinants of Cardiovascular Health, Preventive Cardiology and Global Cardiovascular Health. If you think you are seeing a theme of connectivity, you’ll be correct.

As you review the exciting progress happening within the Council on Epidemiology and Prevention, I hope you will become interested as forming the basis for future activities: Social Determinants of Cardiovascular Health, Molecular Determinants of Cardiovascular Health, Preventive Cardiology and Global Cardiovascular Health.

Council leadership is strongly committed to improving our future efforts to support cardiovascular health for all. We have submitted proposals to establish three of these science subcommittees (Social Determinants of Cardiovascular Health, Molecular Determinants of Cardiovascular Health, Preventive Cardiology and Global Cardiovascular Health). If you think you are seeing a theme of connectivity, you’ll be correct.
